Technologies

- HTML / CSS / Javascript
- CSS Tailwind
- Styled Components
- React
- Typescript
- NodeJS
- Mongo DB
- NextJS
- Figma
- Git

Interests

Sport, Cycling, Furniture Design

Academic History

Codeworks | London
Software Engineering 2020

Durham University | UK
Applied Social Sciences 2010

Profile

Software Developer from London and now based in Switzerland. I have experience designing and building full-stack web applications using the Javascript eco-system with a real passion for turning beautiful UX / UI into clean and scalable frontend solutions.

Experience

Frontend Engineer
Sparrow Ventures | Zurich | 2021 - present

Sparrow Ventures is a Zurich-based venture builder and growth equity investor.

- Worked as part of a team to implement two fullstack projects (WePractice/ Cactous).
- Built and integrated an admin tool for Therapists to log client bookings and update their personal profile. Profile updates then populated directly onto the WePractice website reducing manual work for the Product Owner.
- These projects used various tools / frameworks including Firebase, Dato CMS, NextJS, TypeScript and React Admin.
- Solely re-implented company website using Webflow.

Fullstack Developer Intern
Brandmind | Zurich | 2021 (February - May)

Brandmind utilises AI to understand consumer choices through an interactive game hosted on e-commerce sites.

- Created the code architecture and file structure for the project.
- Setup the Git workflow and added linting to project to minimize technical debt.
- Interpret Figma designs and build the game using React and Bootstrap.
- Implement animations with React Spring.

Frontend Developer
New Work City | Zurich | 2020

New Work City looks to create a decentralised open-source network by using secure contracts on the blockchain to link the client directly to the worker.

- Working with senior developer to develop frontend of the MVP.
- Implement SASS architecture and React best practices.
- Breakdown Figma files and then building them into reusable components.
- Liaise with Blockchain developers to build API endpoints.

Frontend Developer
Zapp | London | 2020 - 2021

Zapp is an app for managing issues in the software development lifecycle. Zapp is designed with small teams in mind and aims to make issue tracking simple and straightforward.

- Designed the UX/ UI with Balsamiq and Figma.
- Led the frontend build using React JS and CSS Tailwind.
- Introduced team to Typescript to ensure type safety and reduce bugs.
